

THE HUNTERS - GAME GUIDE / HOW TO PLAY

Page 1: Game Start

Page 2: Torpedo Loading / Resupply

Page 3: Patrol Screen

Page 4: U-Boat Status Page

Page 5: Attack

To begin a new game, enter your commander name, U-boat # (1-9999), and choose a type. Click start game to begin.

Note that there is no saving games, you must complete the game before closing / reloading page.

The game is almost entirely consistent with the board game it's based off of with some very tiny differences. From a design perspective I chose to hide all dice roll and math, etc behind the game, so the player doesn't see any of that.

The player goes out on a patrol after being given orders and tries to sink as many ships as possible, make it back to port safely, receive awards, refit and resupply, then do it again until August 1943. IF you make it to that point, congratulations! All finished games are logged in the high scores table.

RELOAD & RESUPPLY

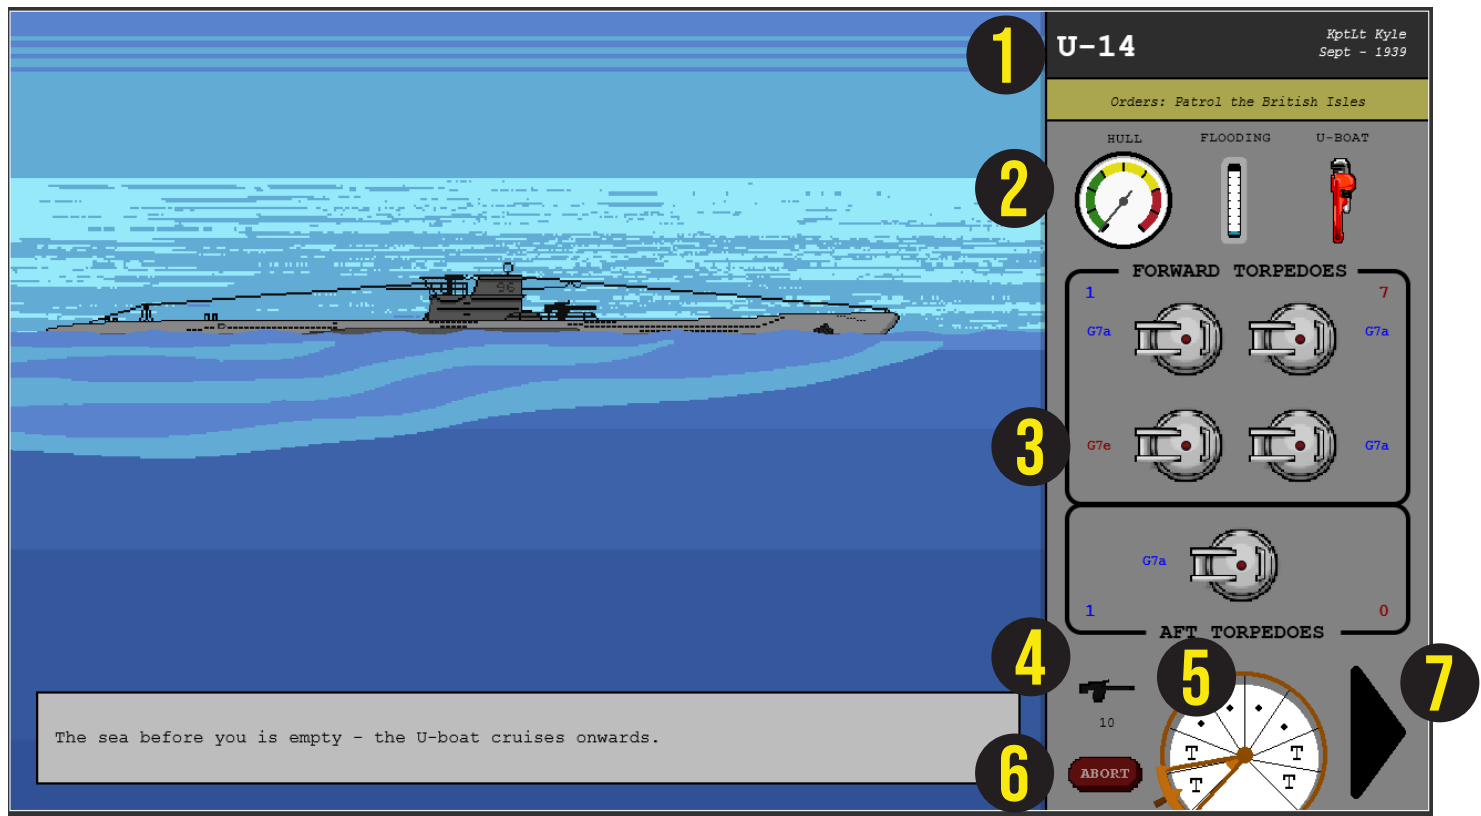

At the start of each patrol, the player can choose their loadout mix of G7a steam torpedoes and G7e torpedoes - which is determined by their U-Boat type.

After choosing their full loadout, they are presented with the screenshot above to load torpedoes into tubes to begin. Simply click each empty tube and load the desired torpedo, clicking again to cycle through options.

Once all tubes have been loaded or there are no more reserve torpedoes, you can commit and move on.

PATROL SCREEN

The above screenshot is the game UI during the patrol. Here are the various sections:

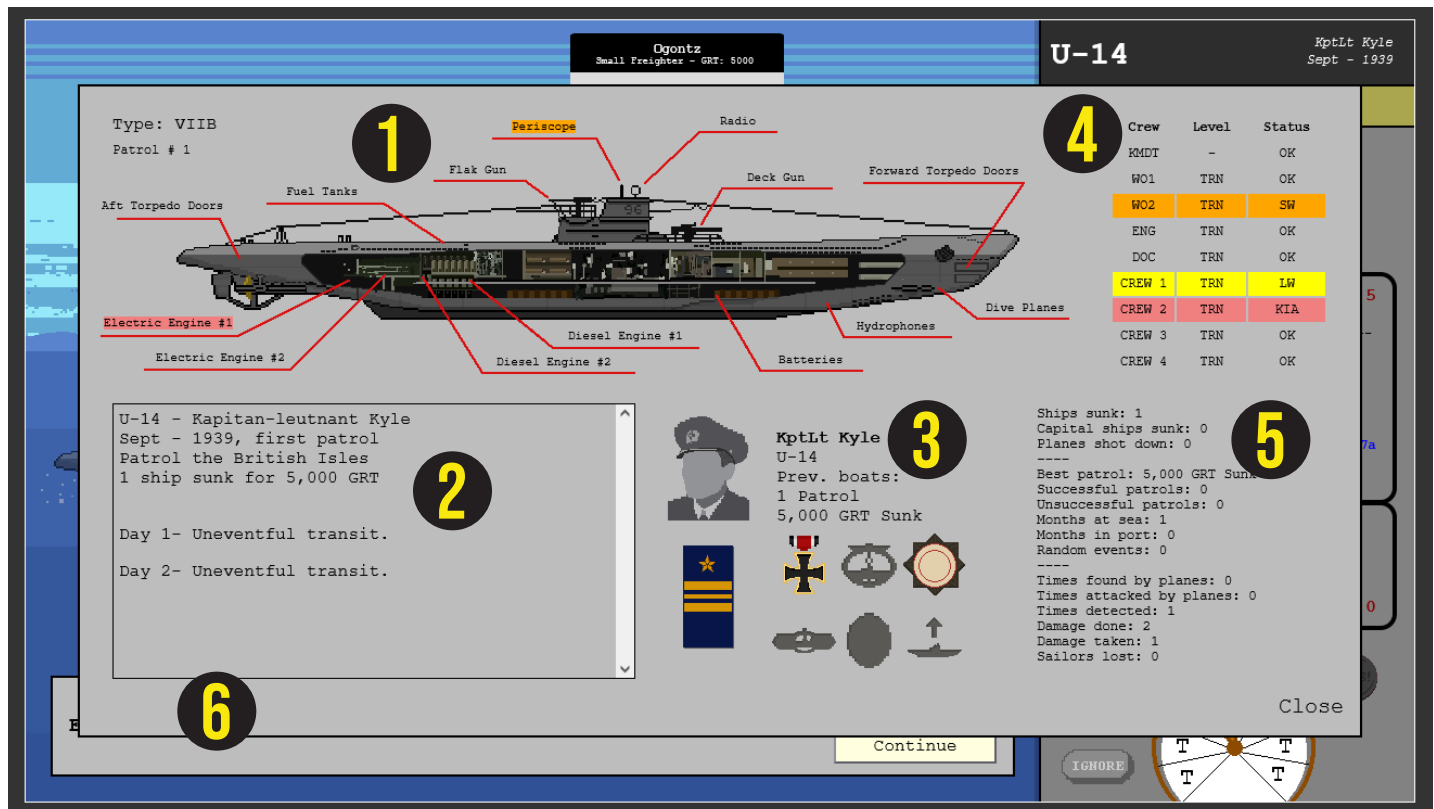

- 1) General U-Boat and game info (U-Boat, Kommandant, Date, and Orders)
- 2) Gauges and Status Menu
 - a) Hull Gauge: Your U-Boat's HP. If this goes beyond the max reading, it's game over.
 - b) Flood Gauge: Your U-Boats flooding HP, also game over if it goes beyond the max.
 - c) U-Boat Status Menu: See next page
- 3) Torpedo Tubes

Loaded types are shown next to their tube. Reserves are shown for respective fore and aft areas in the corners.
- 4) Deck Gun & Deck Gun Ammo
- 5) Patrol Telegraph
 - Represents your patrol- each section is a possible encounter on your patrol. This will ultimately depend on your orders and U-Boat type, with larger U-boats being able to patrol longer.
 - T represent a transit box, BoB represents the dangerous Bay of Biscay transit box.
 - M represents a mission box when on minelaying or Abwehr agent delivery duties
 - A • spot is a normal, on-station patrol box, where you will hope to encounter ships and convoys
- 6) Abort Button

Used to abort a patrol, used to get back to port quicker if you're out of torpedoes
- 7) Continue Button

When the current encounter is finished, use this to move to the next box of the patrol, advancing your telegraph and patrol.

PATROL SCREEN

The above screenshot is the status / pause menu. Here are the various sections:

1) U-Boat System Status

- Each system has effects when damaged. Hover over to see how you're affected when system is out.
- Orange indicates damaged. Will attempt to be repaired when you escape current encounter.
- Red indicates inoperable. These were not able to be repaired and will need to be repaired at port at the end of the patrol.

2) Patrol Log

This is simply a written log of your current patrol, as kept by the Kommandant.

3) Career Section

Kommandant info, rank and decorations.

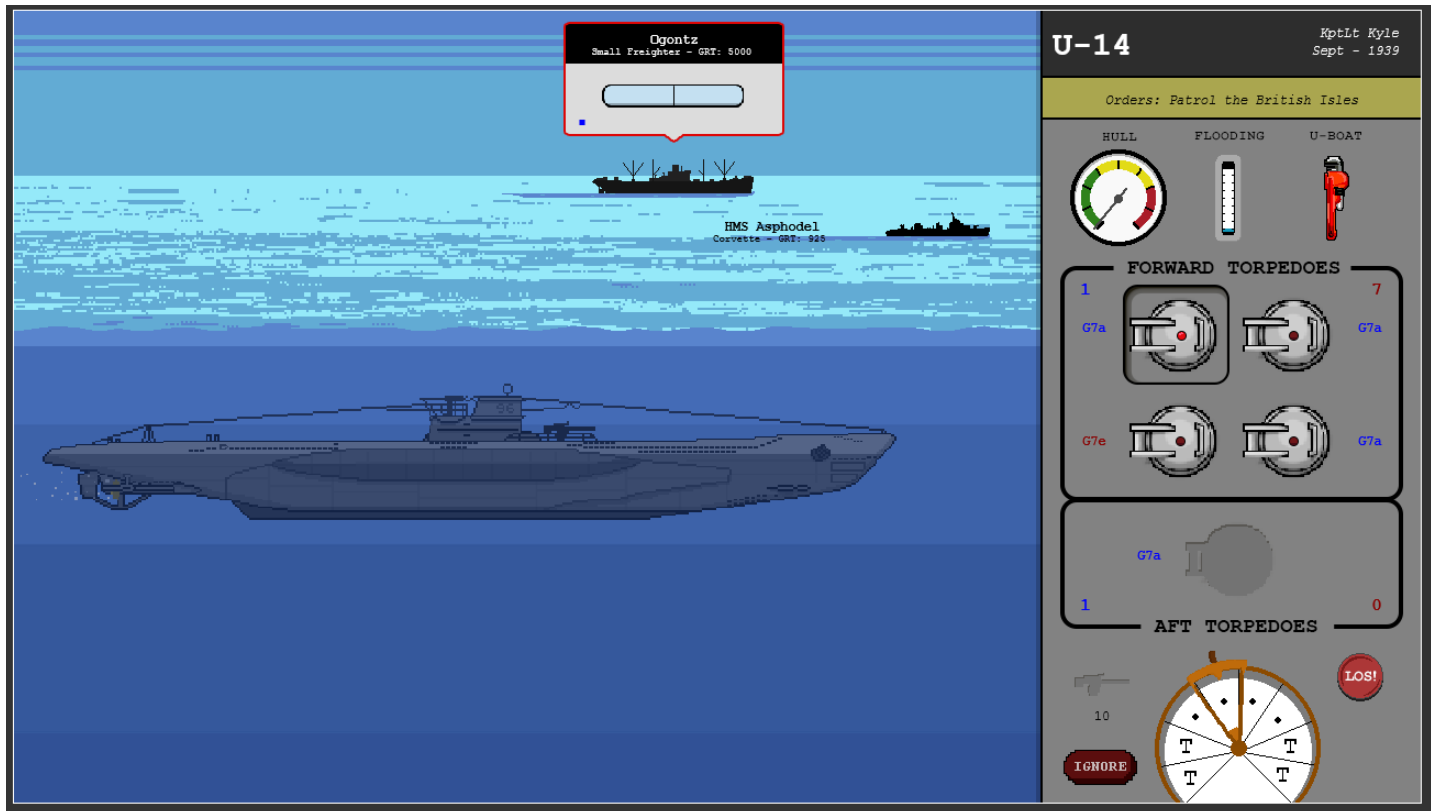

4) Crew Status Section

- Indicates level and status of each crew member.
- Yellow is lightly wounded, orange seriously wounded and red killed in action.

5) Career stats

Random career stats

ATTACK

The above screenshot is a part of the attack loop. When attacking it involves a loop of various steps:

- Choose to engage
- Choose how to engage (Surfaced or submerged, range)
- Check for detection (only if escorted and close range)
- Choose targets and assign torpedoes or deck gun
- Fire
- If escorted, attempt to evade detection or be attacked by escort

To select and fire on a target, simply click that target, then choose each of the torpedoes you'd like to fire at that target. You will see red or blue dots show up next to it indicating you are firing those torpedo type(s) at that target. You can click other targets and assign other torpedoes as well. If surfaced and the target is unescorted, you can choose to fire deck gun shots (up to two) instead.

During the firing phase, you can choose to "Ignore" instead and escape the engagement.
